Python Data Structures

Lists

- Ordered, mutable sequence
- `list.append(x)` — add to end
- `list.pop()` — remove last
- `list[i]` — index access

Dictionaries

- Key-value pairs, unordered
- `dict[key] = val` — set
- `dict.get(key)` — safe get
- `dict.items()` — iterate pairs

Sets

- Unique values, unordered
- `set.add(x)` — add item
- `set & other` — intersection

Tuples

- Ordered, immutable
- Use for fixed data
- `tuple[i]` — index access
